Raymarine AIS 350 Dual Channel Receiver Features

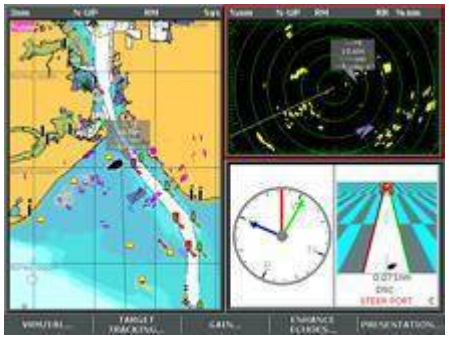
Receiver Module

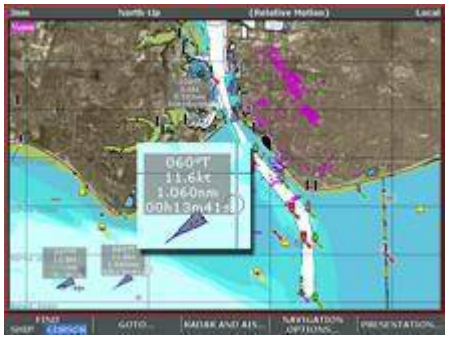
Raymarine's AIS350 is a receive-only AIS device that allows you to receive and display the AIS data transmissions from nearby vessels right on your Raymarine multifunction display's radar or chartplotter screen.

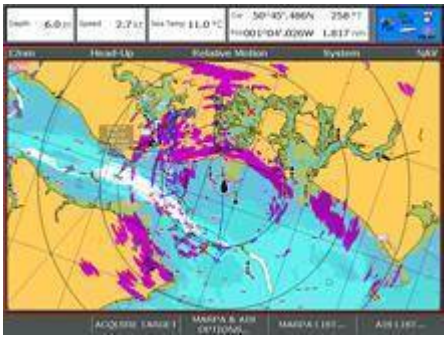
Key features:

- Dual channel receivers – AIS vessel monitoring of class A and B transmissions.
- SeaTalk^{NG} networking for simple integration with Raymarine plotters.
- USB 2.0 port for plug-and-play connection to PC based navigation systems.
- Built-in NMEA multiplexer simplifies integration with legacy Multifunction Displays, VHF radios and 3rd party devices.
- Front-facing multicolor LED indicator for system status and diagnostics.
- Rugged, water resistant (IPX 2) enclosure designed for easy installation.

AIS Features







Buddy Tracking

Both the AIS350 and AIS650 supports Raymarine's exclusive Buddy Tracking feature when used with Raymarine multifunction displays. This allows you to save AIS targets of interest with a special icon and "friendly" name. Buddy tracking makes it easy to spot the boats of friends and family out on the water, or to identify other vessels-of-interest with ease.
